

INAUGURAL LECTURE

Marianne Thomsen
Professor of Industrial Ecology

17 March 2017 14:00

**Niels Bohr Auditorium, Risø,
Frederiksborgvej 399, 4000 Roskilde**

Marianne Thomsen has been appointed Professor of Industrial Ecology at the Department of Environmental Science, Aarhus University, as of 1 November 2016.

Professor Thomsen carries out research into developing waste and production systems and green growth technologies, all of which can help ensure a green transition in Denmark. In her work, Professor Thomsen focuses on developing new models and rethinking systems, technologies and infrastructures for the sustainable management of resources. Her research is carried out in close collaboration with service and production companies, and cutting across sectors.

Professor Thomsen has a BSc in Environmental Chemistry, an MSc in Organic Chemistry from Copenhagen University in 1997. She completed her doctoral degree in Environmental Science & Risk Management from Roskilde University in 2001. She has worked as a researcher since 2001 at the former National Environmental Research Institute, which is now part of Aarhus University. Risk assessment of chemicals in circulation has been a consistent theme throughout Professor Thomsen's career, and she has made considerable contributions to developing the interdisciplinary research field eco-industrial system analysis.

The Department would like to invite you to the inaugural lecture at 14:00 followed by a reception afterwards in the foyer.
RSVP to Klaus at kcc@envs.au.dk by the latest 12 March.
